System-Wide Transit Study Consulting Services

TMD is in the process of completing a major rethinking of transit mobility in Orange County for the Orange County Transportation Authority (OCTA). The goal is to improve efficiency and effectiveness and to provide high-quality service during a period of unstable operating subsidies. The *System-Wide Transit Study* includes a detailed analysis of OCTA's fixed route and paratransit services using available financial, operational, and performance data, plans, and reports. A set of recommendations will be put forward to enhance mobility and grow system ridership while improving service performance. The project includes coordination with the Orange County Council of Governments (OCCOG) Sustainable Community Strategies, also currently underway. The final plan will include short-, medium- and long-term service and capital investment recommendations.

The *System-Wide Transit Study* is expected to be completed by Fall 2011.
